

# Mitel Phone Manager - Professional

Call centre ACD control & CRM integration for MiVoice Office 250

## Overview

The Professional version of Mitel Phone Manager builds on all the great features of Mitel Phone Manager Outlook and introduces a range of features designed to put all your contact centre tasks at your fingertips.

### ACD agent control

Whether you belong to 1 or 10 inbound hunt groups, Mitel Phone Manager Professional gives you a simple way to see which groups you are logged into and then change the status in any group with a simple mouse click. Only groups you are a member of will be displayed so there is no need to remember hunt group numbers or feature codes anymore.

### Toolbar features

In more formal call centre scenarios, multiple configurable toolbars can be centrally designed and assigned to users to maintain a standardised interface for all users. Buttons can be designed to dial popular numbers with one click, launch your Windows applications quickly and easily or be set-up to use any of the 100 MiVoice Office 250 features.

### Soft keys

To automate common telephony and other tasks, 5 user configurable soft keys are included with the software. These allow users access to the phone system feature codes and speed dials which helps to streamline interaction with the telephone.

### CRM integration

As well as support for 1st Party TAPI, the Professional license provides screen pop integration to more than 15 of the most popular CRM applications on the market. Simply configure the user's login credentials and set to pop when ringing or on answer. In most cases the Mitel server database can be configured to synchronise with your CRM to display your customer data on the Mitel Phone Manager call control toaster which can change colour to alert staff to incoming VIP calls.

## Macro and API support

If you have a custom or in-house designed CRM then take advantage of the Professional license's integration tools such as VB Script Macro Design, .NET DLL and COM controls. If your CRM user interface is a browser it's even easier to screen pop with the use of a query string.

## Key features

- *All the features of Mitel phone manager outlook license (see Mitel Phone manager v4.1 Data sheet)*
- *ACD agent control (hunt group Login)*
- *Integrated soft keys (5 buttons), user customisable*
